

DONGU KIM

✉ dongu6213@gmail.com ◇ 🌐 ddubbie.github.io ◇ 🌐 linkedin.com/in/dongu-kim

RESEARCH INTERESTS

Storage disaggregation, hardware/software co-design, kernel-bypass storage and networking stacks, RDMA virtualization, in-network computing, and LLM serving

EDUCATION

Ulsan National Institute of Science and Technology (UNIST) 2022 - 2024
M.S. in Computer Science and Engineering

Inha University 2015 - 2022
B.S. in Electronic Engineering

EXPERIENCES

Mangoboost Inc. Apr 2024 - Present
System Software Engineer

· **NVMe-over-TCP Initiator (NTI): Hardware-offloaded Virtualized NVMe/TCP Accelerator** (*flagship product; published at ISCA '26 Industry Track*)

- Designed and implemented a host-platform-agnostic NVMe/TCP Initiator (NTI) software stack, with an ARM-FPGA-accelerated implementation that offloads TCP and NVMe/TCP processing to hardware while supporting zero-copy data transfer, fault tolerance, and resilience
 - ✓ Implemented full NVMe/PCIe device emulation toward the host NVMe driver, enabling host-platform-agnostic compatibility across Windows, Linux, vhost, and virtualized environments; certified by UNH-IOL
 - ✓ Designed and implemented system-level robustness mechanisms to tolerate datacenter failure scenarios, including network faults and power shutdowns

· **MASS: Scalable, High-Performance Storage System for AI**

- Design and implement an RDMA-based high-performance storage cluster using DPU-JBoFs and flash arrays to store and offload LLM context data, such as KV caches, enabling efficient sharing across GPU clusters
 - ✓ Design and implement a Kubernetes-based storage resource allocation system built on top of Distributed Asynchronous Object Storage(DAOS) to manage storage resources across distributed clusters
 - ✓ Integrate FPGA-based in-house RDMA and DPU cards into the storage cluster and conduct performance evaluations across a variety of workloads
 - ✓ Design and implement a lightweight distributed storage system based on NVMe-over-Fabrics (NVMe-oF), integrating it with LLM serving frameworks such as MoonCake and LMCache

Next Generation Networks and Systems Lab (*Advisor: Youngbin Im*) Mar 2022 - Feb 2024
Research Assistant

· **FlexServer: High-performance Content Servers Accelerated by DPU (400 Gbps Throughput)**

- Designed a DPU-based multi-tier content caching system that reduces data copying in host TCP stacks and accelerates content delivery through an asynchronous I/O stack, achieving up to 351 Gbps, 94% of 400 GbE line rate, and 4.4× higher throughput than the state-of-the-art IO-TCP baseline
 - ✓ Designed and implemented a SmartNIC-based software stack on Netronome Agilio and NVIDIA BlueField platforms, leveraging P4, microC, DPDK, and DOCA for packet control

· **Core Principles of Cloud Computing**

- Studied cloud infrastructure fundamentals, focusing on resource virtualization, SDN (Software Defined Networking), and storage orchestration.

TECHNICAL SKILLS

- **Languages:** C/C++, Go, Python, P4
- **Systems & Frameworks:** Linux, DPDK, SPDK, Kubernetes, DAOS, MoonCake
- **Core Technologies:** RDMA, TCP, PCIe, NVMe, NVMe-oF
- **Hardware Platforms:** NVIDIA BlueField, Netronome Agilio SmartNIC, Xilinx FPGA

EXTRACURRICULAR ACTIVITIES

Competitions & Projects

· **The World Embedded Software Contest 2019**

Apr 2019 - Dec 2019

- Developed multithreaded software for an autonomous RC car featuring real-time obstacle avoidance; gained in-depth expertise in concurrent programming and thread synchronization
- Integrated various sensors—including LiDAR and Ultrasonic—with the software architecture to improve the accuracy of environmental mapping

Volunteer Work

· **Freewheel**

Feb 2020 - Jan 2021

- Served as a volunteer mentor, sharing specialized knowledge about my major to help middle and high school students explore potential career paths and gain a deeper understanding of the field
